

Daily Access · Connect Hub

Connect Hub

One card for Cinema, SSH, NAT, and laptop path

Replaces scattered Daily access panels with a single operator surface on VM detail Overview and a deep Access tab.

Connect Sections

Platform and classic VM detail share the same hub (`data-testid="vm-daily-access"`).

Section	Actions
Connect	Open Cinema, SSH in-browser, copy guest IP, copy NAT-aware laptop <code>ssh</code> command
Laptop path	Inline checklist for libvirt NAT guests (e.g. 192.168.122.x)
Expose service	Presets SSH/HTTP/HTTPS + custom port; compact NAT rules table
Export	Download spec JSON, domain XML, both — full panel on Access tab

Laptop Path Checklist

Progress bar + steps when the guest sits on hypervisor NAT.

VM running

Guest IP known

Expose SSH (2222→22)

Copy laptop command

Automation hooks

- `vm-laptop-access-checklist` test id
- Copy feedback flash on IP and SSH command
- SSH user prefers cloud-init user (e.g. ubuntu)
- NAT banner in SSH connect dialog

Where NAT is configured

- Connect hub presets (Overview / Access)
- Network tab → Hypervisor NAT
- ConsoleHub Ops Shelf → Network lens
- API: `POST /port-forwards`

Access **Tab** Deep Work

Primary tab for connectivity — `?tab=access` or tab bar **Access**.

Expanded on Access

- Full Connect hub with NAT panel open
- Export buttons (JSON, XML, both, copy spec)
- Guest port listeners inline
- Hypervisor NAT rules table

Cross-links

- Guest security & ports tab
- Guest health tab (doctor signals)
- Console tab for Cinema / Studio guidance
- Doctor tab for migrate plans

SSH & Resolved Connect

Unified SSH dialog across VM detail, Machine Finder, Mission Control.

VmResolvedSshConnectDialog

Single dialog component wired from action bar, Connect hub, fleet cards, and Finder table/gallery.

Hypervisor keys

In-browser terminal via daemon PTY — no laptop SSH required for quick ops; laptop command still copyable for power users.
