

ConsoleHub · Machina Cinema & Studio

Machina Cinema

Player-style VM display + engineer Studio layout

Three operator experiences: Cinema for full-screen display, Studio for serial/shell/recovery, Mission Control wall for fleet live preview.

Three Experiences

Public UI copy uses Machina Cinema, Machina Studio, and Ops Shelf — not generic “tabs.”

Mode	URL	Best for
Machina Cinema	<code>/platform/vms/:id/consolehub?mode=cinema</code>	VNC, SPICE, WebRTC — full-screen player HUD
Machina Studio	<code>?mode=studio</code>	Serial, Shell, split panes, recovery cards, lens bar
Mission Control wall	<code>/platform/mission-control/live</code>	Fleet live preview grid (max 6 thumbnails)

VM detail → Open Cinema

ConsoleHub Cinema

Studio toggle / Ops Shelf

Cinema Layout

VM canvas fills the viewport; platform chrome hidden for immersive display access.

Hero canvas

- Sidebar and checklist hidden in Cinema mode
- Fit / Fill / Native / Scroll / Stretch scale modes
- Idle-hide control strip (~3.5s); mouse move reveals HUD
- Screenshot capture from bottom strip

Access Note pill

- Guest / NAT / SSH warnings collapse to one expandable pill
- Command palette ⌘K for scoped console actions
- Studio toggle + Ops Shelf handle on strip
- Serial-recommended VMs auto-redirect Cinema → Studio

Entry points: VM detail Open Cinema, Machine Finder gallery, Fleet Command Center, Spotlight, Live Preview Wall.

Studio Engineer Layout

Lens bar, recovery cards, and Ops Shelf for day-2 console work.

Lens bar

Display · Serial
· Shell · AI —
switch console
modality
without leaving
ConsoleHub.

Recovery cards

ConsoleLoginRecoveryCard,
GuestAccessBanner,
ShellAccessBanner for
login/NAT path guidance.

Ops Shelf

Slide-over
CommandCenterPanel:
port forwards, health,
timeline, network lens
NAT.

Mode persistence

- Key: `localStorage[ 'machina-console-mode:{vmId}' ]`
- Restored when opening consolehub without `mode` query
- Explicit `?mode=cinema` CTAs always honor Cinema

Fleet Surfaces

Cinema entry from gallery rows and Mission Control live wall.

Machine Finder gallery

Gallery lens → Netflix-style rows with poster screenshots → Open Cinema per VM tile.

Live Preview Wall

Mission Control launchpad →
`/platform/mission-control/live` — up to 6 concurrent live thumbnails.

Graphics (VNC + SPICE)

New VMs default `graphics.type: both`.
Add/remove listeners via VM Settings
or API `/graphics/add`.

Deep links

`cinemaHubPath`, `studioHubPath`,
`cinemaPopoutPath` in
`consoleExperienceMode.ts`.

Test Coverage

Suite	Validates
<code>platform-consolehub.spec.ts</code>	Cinema default, pill, strip idle-hide, Studio, Ops Shelf, mode restore
<code>platform-machine-finder.spec.ts</code>	Gallery lens → Open Cinema navigation
<code>platform-mission-control-live.spec.ts</code>	Live wall tiles and preview grid
<code>platform-feature-matrix.spec.ts</code> F11	Cinema shell, recovery card, ops shelf NAT
