

PLATFORM VM DETAIL UX

Machina platform VM detail is organized **machine-first, task-second**: one hero strip, a compact action row, a prioritized attention stack, a single Connect hub, and deep work on dedicated tabs.

Page zones

Zone · Component · Purpose

Hero · `VmDetailHero` · Gradient icon, live state, health/doctor pills, blocker CTA

Actions · `VmDetailActionBar` · Open Cinema, SSH, contextual power, Power & more overflow

Attention · `VmAttentionStack` · One expanded banner; lower issues as chips

Connect · `VmConnectHub` · Cinema, SSH, laptop path, NAT, export (Access tab)

Overview · Info cards, usage, compute, doctor one-liner · Live metrics only ? no host FS or XML bloat

Tabs · Access, Console, Doctor, ? · Deep panels moved out of Overview

Action bar

Always visible: Open Cinema (primary), SSH, one contextual power button (Start / Shutdown / Resume).

Power & more overflow: Pause, reboot variants, NMI, force stop, Studio, Virt-Viewer, pop out, Delete.

Ask Zeus opens Spotlight with VM blockers and suggested intents (vmDetailSpotlight.ts).

Attention stack

Priority order:

1. Pending config shutdown
2. Guest agent offline
3. Laptop NAT path incomplete

Rules: show **top priority expanded**; click chips to swap expanded banner; guest-agent dismiss persists per VM in localStorage.

Connect hub

Single card (data-testid="vm-daily-access") on Overview; full panel on **Access** tab (?tab=access).

Sections:

- **Connect** ? Open Cinema, SSH, copy laptop command, copy IP
- **Laptop path** ? progress bar + checklist for NAT VMs (192.168.122.x)
- **Guest ports** ? expose top listeners inline
- **Hypervisor NAT** ? collapsed on Overview; expanded on Access tab
- **Export** ? spec JSON + domain XML (Access tab)

SSH user prefers cloud-init user (e.g. ubuntu) over stored prefs when available.

Access tab

Primary tab for connectivity deep work:

- Full Connect hub with NAT panel and export
- Links to Guest security & ports and Guest health tabs
- Same NAT presets as Network ? Hypervisor NAT and ConsoleHub Ops Shelf

Slim Overview

****Removed from Overview** (deep links instead):**

- Host resources panel ? host detail link
- Full doctor panel ? Doctor tab + one-line summary
- Domain XML editor ? Settings tab
- AI terminal tips ? Console tab
- Organization fields ? Settings tab

****Kept:**** desired state, lifecycle, project, backup cards; live usage bars; compute topology; Connect hub; attention stack.

Tests

Suite · Coverage

``web/e2e/platform-feature-matrix.spec.ts`` · F01?F13 serial mock matrix
``web/e2e/platform-live-feature-matrix.spec.ts`` · Live lab smoke (read-only)
``web/e2e/platform-vm-operator.spec.ts`` · Connect hub, action bar, Access tab

See Platform feature QA matrix for feature IDs F01?F13.
