

PLATFORM FEATURE QA MATRIX

Walk through platform access flows **one feature at a time** (F01-F13). Each ID maps to an automated Playwright test in mock and live suites.

See also: Platform VM Detail UX, VM daily access (Connect hub).

Feature index

ID · Feature · UI steps (manual) · Expected · Mock test · Live test

F01 · VM detail hero · Open VM detail Overview · Hero strip with gradient icon, state, pills (blockers / Doctor / SSH) ·

``npm run test:e2e:features -- -g F01`` · ``npm run test:e2e:features:live -- -g F01``

F02 · Action bar · Header: Cinema, SSH, Power & more · Primary CTAs visible; overflow shows Studio / force reboot · ``-g F02`` · ``-g F02``

F03 · Attention stack · Overview banners; click secondary chip · Top issue expanded; chip click swaps banner · ``-g F03`` · ``-g F03``

F04 · Connect hub (Overview) · Connect card: Cinema, SSH, copy, laptop path · ``vm-daily-access``, checklist, copy feedback · ``-g F04`` · ``-g F04``

F05 · Access tab · Tab **Access** or ``?tab=access`` · Full NAT panel + export buttons · ``-g F05`` · ``-g F05``

F06 · SSH dialog · Header **SSH** · NAT banner, expose SSH action · ``-g F06`` · ``-g F06``

F07 · NAT presets · Network tab ? Expose SSH · POST ``/port-forwards`` 2222?22 · ``-g F07`` · ``-g F07``

F08 · Overview body · Overview scroll · Usage bars + Doctor one-liner · ``-g F08`` · ``-g F08``

F09 · Console tab · ``?tab=console`` · Cinema + Studio guidance links · ``-g F09`` · ``-g F09``

F10 · Doctor tab · Doctor ? Run migrate plan · Deep-link to Guest health · ``-g F10`` · ``-g F10``

F11 · ConsoleHub / Cinema · Open Cinema; Serial lens; Ops shelf · ``cinema-shell``, recovery card, ops shelf NAT · ``-g F11`` · ``-g F11``

F12 · Machine Finder · Table SSH; Gallery ? Cinema · SSH dialog; consolehub navigation · ``-g F12`` · ``-g F12``

F13 · Mission Control · Platform home ? VM card ? SSH · Fleet command center SSH dialog · ``-g F13`` · ``-g F13``

Run all features (mocked, local)

From web/:

```
npm run build
```

```
npm run test:e2e:features
```

Runs serially (workers: 1) in feature order F01-F13.

Run single feature (mock)

```
npm run test:e2e:features -- -g "F04"
```

Run live lab matrix

Requires a running platform with at least one libvirt VM:

```
export PLAYWRIGHT_LIVE_URL=https://212.8.252.194:5092
```

```
export PLAYWRIGHT_LIVE_USER=sus
```

```
export PLAYWRIGHT_LIVE_PASS=max
```

```
export PLAYWRIGHT_LIBVIRT_VM_ID=87ddc1a8-b0e9-43c4-b866-faf219663f7f # optional; auto-picks NAT VM
```

```
cd web && npm run test:e2e:features:live
```

Live tests are **read-only** (no delete, force reboot, or destructive power actions).

Remote runner (mock + live on lab host)

From repo root:

```
VSPASS=max ./scripts/e2e-feature-matrix-remote.sh sus 212.8.252.194
```

Optionally set PLAYWRIGHT_LIBVIRT_VM_ID before running.

Include in full platform E2E

```
E2E_FEATURE_MATRIX=1 VSPASS=max ./scripts/e2e-platform-complete-remote.sh sus 212.8.252.194
```

Test files

Suite · File

Mock matrix · [web/e2e/platform-feature-matrix.spec.ts](../web/e2e/platform-feature-matrix.spec.ts)

Live matrix · [web/e2e/platform-live-feature-matrix.spec.ts](../web/e2e/platform-live-feature-matrix.spec.ts)

Helpers · [web/e2e/helpers/featureMatrix.ts](../web/e2e/helpers/featureMatrix.ts)

Success criteria

- All 13 mock tests pass in CI without live env.
- Live matrix passes or skips gracefully when VM state differs (stopped guest, SSH already exposed, etc.).
